Udacity

Intro to Machine Learning with TensorFlow

February 2025 - March 2025 (2 months)

- Developed supervised learning models to predict potential donors for a charity, improving outreach efficiency.
- Built a deep neural network with TensorFlow for accurate classification of flower species images.
- Analyzed customer spending data using unsupervised learning, identifying distinct segments for targeted marketing strategies.

## Elevashopping

Full Stack E-commerce Developer

October 2024 - December 2024 (3 months)

Nablus, West Bank

- Developed a comprehensive e-commerce platform, enhancing user experience from concept to launch.
- Designed intuitive interfaces that improved customer navigation and engagement.
- Collaborated with the brand team to integrate key features, boosting customer satisfaction and retention.

## MTIT\_PS

5 months

Full-Stack Developer (React.js, Node.js, MongoDB)

September 2023 - November 2023 (3 months)

Ramallah, West Bank

- Collaborated with a partner to develop a full-stack e-commerce website for an electronics shop.
- Implemented features such as product listings, filtering, shopping cart functionality, and user authentication.
- Enhanced skills in RESTful API integration and database management using MongoDB.
- Strengthened collaborative development abilities in a dynamic startup environment at MTIT\_PS.

## Web Developer

July 2023 - October 2023 (4 months)

Ramallah, West Bank

- Collaborated with a team to design and develop a comprehensive website for the Ministry of Tourism and Antiquities.
- Utilized HTML, CSS, and JavaScript to create an interactive platform featuring a login system and a showcase of historical sites.
- Enhanced user experience through effective content structuring and user interface design, resulting in a polished final product.

---
